

Test Case ID	Module	Test Case Title	Request / Body	Method	Url	Test Steps	Expected Result	Actual Result	Priority	Status	Tester
API-TC-01	Products List	Verify GET request returns all products list successfully	Not required (Public API)	Get	https://automationexercise.com/api/products-list	Open Postman Select GET method Enter products API endpoint Click Send Check status code and response body Send GET request Open response body Verify every product object contains product name field	The API should return status code 200 OK and a complete list of all products in the response.	API returned status code 200 and products list displayed successfully.	HIGH	PASS	Menna Adel
API-TC-02	Products List	Verify product names are visible	Not required (Public API)	Get	https://automationexercise.com/api/products-list	Confirm names are readable and not null Send GET request Check image URL field for each product Copy image URL into browser Verify image opens successfully	Each product in the response should contain a valid product name field that is not null or empty.	All product names are visible in the response body.	HIGH	PASS	Menna Adel
API-TC-03	Products List	Verify product images are loaded	Not required (Public API)	Get	https://automationexercise.com/api/products-list	Send GET request Inspect all product IDs in response Compare IDs manually or using Postman tests Ensure no repeated IDs exist	Each product should contain a valid image URL and images should be accessible (no broken links).	All product image URLs opened successfully.	MEDIUM	PASS	Menna Adel
API-TC-04	Products List	Check that each product	Not required (Public API)	Get	https://automationexercise.com/api/products-list	Send GET request Check product names and IDs Compare records in response Verify no duplicated product entries	Every product should have a unique identifier (ID) with no repetition.	Each product has a unique ID with no duplicates.	HIGH	PASS	Menna Adel
API-TC-05	Products List	Ensure each product has a unique ID Ensure no duplicate products exist in the response	Not required (Public API)	Get	https://automationexercise.com/api/products-list	Send GET request multiple times Complete order of returned products Verify products appear in same sequence every time	The response should not contain duplicate product entries (no repeated products).	No duplicate products exist in the response.	HIGH	PASS	Menna Adel
API-TC-06	Products List	Verify if product order is consistent across multiple requests	Not required (Public API)	Get	https://automationexercise.com/api/products-list	Send GET request Check product price values Verify all prices follow same format	The order of products should remain consistent and unchanged across multiple API calls.	Product order remained consistent across multiple requests.	MEDIUM	PASS	Menna Adel
API-TC-07	Products List	Ensure price format is correct and consistent	Not required (Public API)	Get	https://automationexercise.com/api/products-list	Send GET request Check for null, broken, or unavailable data Verify response JSON structure is valid	All product prices should follow a valid and consistent format (e.g., numeric or currency format like \$10.99).	Product prices are displayed in correct and consistent format.	MEDIUM	PASS	Menna Adel
API-TC-08	Products List	Ensure product data is complete and not corrupted	Not required (Public API)	Get	https://automationexercise.com/api/products-list	change method to POST Use same endpoint Click Send Verify status code is 405	Each product should have all required fields populated correctly (no missing or corrupted data like null/invalid values).	Product data is complete and valid without corruption.	LOW	PASS	Menna Adel
API-TC-09	Products List	Verify POST request to productsList endpoint returns 405 status code	Not required (Public API)	post	https://automationexercise.com/api/products-list	Send POST request to endpoint Inspect response body Verify error message indicates unsupported method	405 Method Not Allowed	POST request returned 405 Method Not Allowed status code.	HIGH	PASS	Menna Adel
API-TC-10	Products List	Verify response message for unsupported POST method is correct	Not required (Public API)	post	https://automationexercise.com/api/products-list	Send GET request – verify success response Send POST request on same endpoint Verify POST request fails with proper error code	This request method is not supported	Correct error message displayed for unsupported POST request.	HIGH	PASS	Menna Adel
API-TC-11	Products List	Verify GET method works while POST method fails on the same endpoint	Not required (Public API)	post	https://automationexercise.com/api/products-list	send POST request Check response time in Postman Verify response returns within acceptable limit	success, POST = failure (405)	GET request succeeded while POST request failed as expected.	MEDIUM	PASS	Menna Adel
API-TC-12	Products List	Verify response time for invalid POST request	Not required (Public API)	post	https://automationexercise.com/api/products-list	Send unsupported methods: POST PUT DELETE Verify API blocks invalid methods Check no sensitive data is exposed Send POST request multiple times Verify every response returns: 405 Method Not Allowed Ensure behavior remains consistent	Proper error message is returned in response body	Invalid POST request returned response within acceptable time.	LOW	PASS	Menna Adel
API-TC-13	Products List	Verify API security behavior against unsupported HTTP methods	Not required (Public API)	post	https://automationexercise.com/api/products-list	Send POST request with different Content-Types: application/json text/plain form-data Check API response Verify unsupported request still returns correct error handling	No unauthorized access or data exposure occur	API rejected unsupported HTTP methods securely.	HIGH	PASS	Menna Adel
API-TC-14	Products List	Verify API returns consistent 405 error for repeated POST requests	Not required (Public API)	post	https://automationexercise.com/api/products-list	Even with valid Content-Type, request is rejected Status code = 200 Response body is returned successfully Response contains brands list JSON Content-Type should be application/json Response format should be valid JSON rande anything should not be empty At least one brand object exists	Same error response every time	API consistently returned 405 status for repeated POST requests.	HIGH	PASS	Menna Adel
API-TC-15	Products List	Verify Content-Type handling for POST request to productsList endpoint	Not required (Public API)	post	https://automationexercise.com/api/products-list	Send GET request to endpoint Send GET request Check response headers Send GET request Inspect response body	API handled unsupported Content-Type correctly and returned proper error.	API handled unsupported Content-Type correctly and returned proper error.	HIGH	PASS	Menna Adel
API-TC-16	Brand List	Verify Get All Brands List Successfully	Not required (Public API)	Get	https://automationexercise.com/api/brands-list	Send GET request to endpoint Send GET request Check response headers Send GET request Inspect response body	Response code = 200 Response body is returned successfully Response contains brands list JSON Content-Type should be application/json Response format should be valid JSON rande anything should not be empty At least one brand object exists	responseCode": 200 text/html; charset=utf-8	HIGH	PASS	Menna Adel
API-TC-17	Brand List	Verify Response Content Type	Not required (Public API)	Get	https://automationexercise.com/api/brands-list	Send GET request to endpoint Send GET request Check response headers Send GET request Inspect response body	Response code = 200 Response body is returned successfully Response contains brands list JSON Content-Type should be application/json Response format should be valid JSON rande anything should not be empty At least one brand object exists	responseCode": 200 text/html; charset=utf-8	MEDIUM	Fail	Menna Adel
API-TC-18	Brand List	Verify Brands List is Not Empty	Not required (Public API)	Get	https://automationexercise.com/api/brands-list	Send GET request to endpoint Send GET request Check response headers Send GET request Inspect response body	Response code = 200 Response body is returned successfully Response contains brands list JSON Content-Type should be application/json Response format should be valid JSON rande anything should not be empty At least one brand object exists	responseCode": 200 text/html; charset=utf-8	HIGH	PASS	Menna Adel
API-TC-19	Brand List	Verify Each Brand Contains Required Fields	Not required (Public API)	Get	https://automationexercise.com/api/brands-list	Send GET request to endpoint Send GET request Check response headers Send GET request Inspect response body	Every brand contains: id brand No null or missing required fields	responseCode": 200 text/html; charset=utf-8	HIGH	PASS	Menna Adel
API-TC-20	Brand List	Verify API Handles Unsupported Method	Not required (Public API)	post	https://automationexercise.com/api/brands-list	Send GET request to endpoint Send GET request Check response headers Send GET request Inspect response body	API should reject request Proper error message returned Status code should indicate invalid method (400 / 405) depending on API behavior	responseCode": 200 text/html; charset=utf-8	MEDIUM	Fail	Menna Adel
API-TC-21	login	Verify Login with valid email and password	Not required (Public API)	post	https://automationexercise.com/api/verify/login	Send POST request instead of GET 1. Open Postman or API tool. 2. Select POST method. 3. Enter API URL: https://automationexercise.com/api/verify/login 4. Add valid email and password in request body. 5. Click Send.	Response code should be 200. Response message should be "User exists!"	API returned response code 200 and message "User exists!"	HIGH	PASS	Boothra
API-TC-22	login	Verify Login without email parameter	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Open Postman or API tool. 2. Select POST method. 3. Enter API URL: https://automationexercise.com/api/verify/login 4. Add invalid email and password. 5. Click Send.	Response code should be 400. Response message should be "Invalid request, email or password parameter is missing in POST request."	API returned response code 400 with correct error message	HIGH	PASS	Boothra
API-TC-23	login	Verify Login using DELETE request	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Open Postman or API tool. 2. Select POST method. 3. Enter API URL: https://automationexercise.com/api/verify/login 4. Click Send.	Response code should indicate invalid request method.	API should return error message for unsupported DELETE request	MEDIUM	PASS	Boothra
API-TC-24	login	Verify Login with invalid email and password	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Open Postman or API tool. 2. Select POST method. 3. Enter API URL: https://automationexercise.com/api/verify/login 4. Add invalid email and password. 5. Click Send.	Response code should be 404 or error response. Message should indicate invalid user details.	API returned error message for invalid credentials	HIGH	PASS	Boothra
API-TC-25	login	Verify Login without password parameter	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Open Postman or API tool. 2. Select POST method. 3. Enter API URL: https://automationexercise.com/api/verify/login 4. Add only email parameter. 5. Click Send.	Response code should be 400. Response message should indicate missing password parameter.	API returned response code 400 with correct error message	HIGH	PASS	Boothra
API-TC-26	login	Verify API response time	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Open Postman. 2. Send POST request with valid login credentials. 3. Check response time 1. Select POST method. 2. Enter API URL. 3. Leave email field empty and enter password. 4. Click Send.	API response time should be less than 3 seconds.	Response time was within acceptable limit.	MEDIUM	PASS	Boothra
API-TC-27	login	Verify Login with empty email field	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Open Postman. 2. Send POST request with valid login credentials. 3. Check response time 1. Select POST method. 2. Enter API URL. 3. Leave email field empty and enter password. 4. Click Send.	API should return validation error message.	API returned validation error for empty email.	HIGH	PASS	Boothra
API-TC-28	login	Verify Login with empty password field	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Open Postman. 2. Send POST request with valid login credentials. 3. Check response time 1. Select POST method. 2. Enter API URL. 3. Leave email field empty and enter password. 4. Click Send.	API should return validation error message.	API returned validation error for empty password	HIGH	PASS	Boothra
API-TC-29	login	Verify Login with special characters in email	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Open Postman. 2. Send POST request with valid login credentials. 3. Check response time 1. Select POST method. 2. Enter API URL. 3. Leave email field empty and enter password. 4. Click Send.	API should reject invalid email format.	API rejected invalid email format successfully.	MEDIUM	PASS	Boothra
API-TC-30	login	Verify Login with SQL Injection attempt	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Open Postman. 2. Send POST request with valid login credentials. 3. Check response time 1. Select POST method. 2. Enter API URL. 3. Leave email field empty and enter password. 4. Click Send.	API should block SQL injection and return error response.	API rejected malicious input successfully.	HIGH	PASS	Boothra
API-TC-31	login	Verify Login with very long input values	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Open Postman. 2. Send POST request with valid login credentials. 3. Check response time 1. Select POST method. 2. Enter API URL. 3. Leave email field empty and enter password. 4. Click Send.	API should handle long input safely without crashing	API handled long input correctly	MEDIUM	PASS	Boothra
API-TC-32	login	Verify API supports POST method only	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Try GET request on login API. Click Send.	API should reject unsupported request method.	API returned method not supported message.	MEDIUM	PASS	Boothra
API-TC-33	login	Verify Login with invalid email format	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Enter invalid email format like test@gmail.com. 2. Enter password. Click Send.	API should return invalid email format error.	API returned proper validation error.	HIGH	PASS	Boothra
API-TC-34	login	Verify API response content type	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Send valid POST request. 2. Check response headers. 1. Send POST request without body parameters. Click Send.	Content-Type should be application/json.	API returned JSON response successfully.	LOW	PASS	Boothra
API-TC-35	login	Verify Login without request body	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Open Postman. 2. Select POST method. 3. Enter API URL. 4. Add spaces before and after email/password values. 5. Click Send.	API should return missing parameter error.	API returned correct error message.	HIGH	PASS	Boothra
API-TC-36	login	Verify Login with spaces in email and password	Not required (Public API)	post	https://automationexercise.com/api/verify/login	1. Open Postman. 2. Select POST method. 3. Enter API URL. 4. Add spaces before and after email/password values. 5. Click Send.	API should trim spaces or return validation error.	API handled spaces correctly and returned proper response.	MEDIUM	PASS	Boothra
